PROFESSIONAL SUMMARY

Frontend Engineer who cares deeply about the **craft of interaction** — building interfaces that feel right, are **responsive, performant, and pixel-perfect**. Specializes in **React.js and TypeScript**, with a strong curiosity about what the browser is actually doing (**DOM, rendering pipeline, network behavior**). Prefers **elegant code over clever code** and takes pride in **translating UI/UX designs** into clean, well-structured frontends. Experienced collaborating across **cross-functional teams** (UI/UX, Backend, QA) in **remote, distributed environments**.

SKILLS

UI/UX & Performance: Figma to Code, Pixel-Perfect Implementation, UI/UX Principles, Performance Optimization, SEO Optimization, Cross-Browser Compatibility, Browser Internals (DOM, Rendering Pipeline, Network Behavior), Client-Side Caching

Frontend: React.js, JavaScript (ES6+), TypeScript, Next.js (SSR/SSG), HTML5, CSS3, Bootstrap, TailwindCSS, shadcn/ui (Radix UI), Zustand, Redux Toolkit, TanStack Query, GraphQL, Responsive Design, AJAX

Testing: Jest, Playwright, Vitest, Unit, Integration & E2E Testing

Backend: Node.js, Express.js, PostgreSQL, MongoDB, RESTful API Integration

DevOps & Tools: Git (GitFlow, Code Reviews, Branching Strategy), CI/CD (GitLab CI), Docker, Figma, Adobe XD

Methodologies: Agile (Scrum/Kanban), Jira, Cross-Functional Collaboration (UI/UX, Backend, QA)

Experience

Software Engineer L3, [Zatiq](#) ↗ May 2025 – Present

- Translated UI/UX designs into high-quality, responsive web interfaces for a consumer-facing SaaS platform using React.js, Next.js, and TypeScript, ensuring pixel-perfect implementation across desktop, tablet, and mobile.
- Built optimized, scalable frontend architectures with client-side caching (Zustand, TanStack Query), performance optimization, and seamless API integration for real-time data handling.
- Collaborated with UI/UX designers, backend engineers, and QA teams in Agile ceremonies, leading code reviews and ensuring cross-browser compatibility.
- Ensured production reliability through comprehensive testing (Jest, Vitest, Playwright) and CI/CD pipelines (GitLab CI) for automated deployment.

Software Engineer, [Developer Experience Hub](#) ↗ Dec 2021 – April 2025

- Led frontend development for a dynamic platform, translating UI/UX designs into engaging, responsive interfaces with strong focus on UI/UX principles and performance optimization.
- Integrated RESTful APIs with AJAX and state management (Redux), handling asynchronous data efficiently and connecting the frontend seamlessly with backend services.
- Optimized frontend performance, SEO, and cross-browser compatibility. Integrated CI/CD pipelines and Docker for automated deployments.
- Mentored junior developers through code reviews, collaborating with designers and backend teams in Agile (Kanban) to deliver seamless user experiences.

Frontend Developer (First 3 months Intern), [Hi-Tech Bangla](#) ↗ April 2020 – Nov 2021

- Collaborated with cross-functional teams including designers and backend developers to translate UI/UX designs into responsive interfaces with seamless API integration.
- Optimized frontend components for performance and cross-browser compatibility using HTML5, CSS3, JavaScript, and Bootstrap.

Projects

Zatiq Theme Builder – Multi-Vendor E-Commerce SaaS Platform | [MERCHANT](#)

- **Architected the frontend** for a **scalable SaaS JSON-to-React** theme builder using **React, TypeScript, and Next.js**, translating **UI/UX designs** into 50+ reusable, **pixel-perfect** components with **real-time responsive preview** across desktop/tablet/mobile viewports.
- Built a production-grade visual page builder with **Zustand state management** (undo/redo), **React-DND** drag-drop canvas, 100+ component variants across 22 categories, and **dynamic data binding** system.
- Engineered a scalable multi-tenant theme engine supporting recursive rendering, conditional logic, animations, and event-driven interactions with 8 page-specific renderers.

Sharp Archive – Enterprise Compliance Platform | [LIVE DEMO](#)

- **Architected the frontend for an enterprise-grade compliance platform** designed to ingest, monitor, and securely archive massive volumes of real-time communication data across 7+ APIs (Facebook, LinkedIn, Twitter, Microsoft, Gmail).
- **Built scalable, high-performance dashboards** utilizing **Nuxt.js, Tailwind CSS, and Pinia**, enabling B2B clients to seamlessly manage **regulatory compliance, audit trails, and Role-Based Access Control (RBAC)**.
- **Handled complex state management and UI synchronization** for real-time data monitoring, ensuring the frontend could render **high volumes of work items across multi-panel layouts and multi-entity detail screens** efficiently without bottlenecking browser performance.

Parkolay – 3D Vehicle Monitoring & Automation Platform

- **Engineered a 3D Digital Twin** for automated vehicle management using **Babylon.js** and **TypeScript**, visualizing real-time **car positioning and lift mechanics** to mirror complex automotive automation standards.
- **Architected an interactive control dashboard** that bridges hardware logic with frontend state, optimizing **WebGL rendering performance** for complex 3D scenes to ensure seamless tracking from entry to exit.
- **Enhanced operational efficiency by 40%** through precise visual monitoring and implemented comprehensive **Unit Testing (Jest)** for 3D logic components, ensuring high reliability in critical movement simulations.

Smart Appointment & Queue Manager – Full-Stack Application | [GITHUB](#) | [LIVE](#)

- **Appointment scheduling system** using **Next.js 16, React 19, TypeScript, Express.js, and PostgreSQL**, featuring **conflict detection algorithm**, staff availability tracking, **service duration management** for optimized resource allocation.
- Built a **responsive real-time dashboard** utilizing parallel data fetching, **workflow-driven task management, prioritized queues**, and audit-compliant activity logs.
- Implemented **admin interfaces and tenant-scoped settings** with JWT authentication (access + refresh tokens), **Prisma ORM** for type-safe database operations, **Zod schema validation**, and modern UI components using **shadcn/ui**.

Smart News Reader with AI – Full-Stack Application | [GITHUB](#) | [LIVE](#)

- **Built the entire full-stack system** using **React 19, TypeScript, TanStack Query v5, and Tailwind CSS v4** on the frontend with **FastAPI (Python), SQLAlchemy async, and PostgreSQL** on the backend, featuring paginated feeds, **threaded comment trees**, bookmarking, and **responsive UI with client-side caching**.
- Developed **human-in-the-loop AI features** with dual-provider LLM integration (**Gemini 2.5 Flash + Groq fallback**), generating one-click discussion summaries with **sentiment analysis** and key points extraction, cached in PostgreSQL to eliminate redundant API calls.
- Engineered a **high-performance async backend** with **RESTful API design, in-memory TTL caching** for HN API proxy, batch bookmark checking, and **Docker Compose** deployment with multi-stage builds and Nginx.

Education

Port City International University

May 2019 – April 2023

Bachelor of Science in *Computer Science and Engineering*

- **GPA:** 3.65/4.0 ([Academic Transcript](#))
- **Coursework:** Data Structures & Algorithms, Software Engineering, AI & Machine Learning, Object-Oriented Programming.

Language Certificate

Duolingo English Test: [CERTIFICATE](#) | Listening 125 | Reading 130 | **Writing 155** | Speaking 125
